The following function: function getEventDateRange(start, end) { var newDate = new Date(); newDate.setDate(start.getDate()); newDate.setHours(start.getHours()); newDate.setMinutes(start.getMinutes()); newDate.setSeconds(start.getSeconds()); newDate.setMilliseconds(0); newDate.setMonth(0); // month zero newDate.setFullYear(end.getFullYear(), end.getMonth(), end.getDate()); return newDate; } Results in the following dates: Thu Jan 01 1970 Sun Jun 01 2300 Fri Jun 30 2300 Fri Jun 30 1970 Sun Jun 01 2300 Why would it be valid and what is the point of setting the month to 0? A: What you've written is valid, but it won't work the way you're expecting. This will give the results you've specified. function getEventDateRange(start, end) { var newDate = new Date(); newDate.setDate(start.getDate()); newDate.setHours(start.getHours()); newDate.setMinutes(start.getMinutes()); newDate.setSeconds(start.getSeconds()); newDate.setMilliseconds(0); newDate.setMonth(0); // month zero newDate.setFullYear(end.getFullYear(), end.getMonth(), end.getDate()); return newDate; } as a post-graduate at Varanas

In the past, one way of obtaining this accuracy was to provide a mechanical feedback system. However, this method is not well suited for automatic, one-time-only calibration, is too bulky and expensive for simple systems, and has reliability problems of moving parts in otherwise aperiodic conditions. From a historical perspective, phase shifters are old in the art. An early mechanically interlocked system that actually controlled phase and not just phase shift was described by A. Ellis and W. G. Stetten (SRC-MIT, patent No. 2,842,895), who provided a torsion mechanism with pivoting connectors between a high and low impedance converter. More recently, certain types of phase shifters have been utilized in fiber optic communications, e.g. in the differential non-return-to-zero (DNRZ) 1.5 Gb/s case. These are phase shift plates with mirroring interferometric gratings to convert an optical signal to a corresponding electrical signal. The important phase shift should ideally be an integral number of half wavelengths at the operating wavelength. When the phase shift plate has a reflecting surface, the phase shift may be realizable as a phase shift to only one side of the 6d1f23a050
