What's New in the AutoCAD?

When you place your cursor over a drawing on your screen, the Import Drawing command automatically starts with a temporary drawing and instantly displays the pages of the import file. You can import the entire file or just the currently active page. Import files are organized by object type, so you can choose which objects you want to import. You can also decide whether you want to see changes made to imported objects. With AutoCAD Markup Assist, you can: Send markup automatically to your drawings, without requiring the markup to be printed. (video: 1:23 min.) Insert, alter, and edit multiline text fields in real time, and easily paste the results into your drawing. Markup Assist is a new feature of AutoCAD Professional 2020. It enables you to insert, alter, and edit text without using the text command in the Drawing toolbar. With AutoCAD Professional 2010, you could customize the appearance of the Markup toolbars. It was as simple as choosing a style and creating a new toolbar. But with AutoCAD 2023, you can create any toolbar you want, and add commands and buttons to the toolbar. Now you can customize the behavior of the Markup toolbar and create custom Markup toolbars in seconds, without writing a line of code. Object Snapping Sets: You can customize each object snapping set (All, Lines, Nodes, Rectangles, Polylines, and Shapes). The following attributes define the new options: Object snaprings can be resized and rotated to any angle. You can also use the object snapping to determine whether your object snaps to the closest vertex, midpoint, or an exact point on a polyline. With AutoCAD Professional 2016, the new Object Snapping Set dialog box makes it easier to use multiple snaprind sets in a drawing. The dialog box gives you a grid to help you locate object snaprind sets quickly. Create a new snapping set, add snaprinds to your drawing, and easily add different types of object snaps to the snaprinds.
