Open your Autocad project. Go to the Project Data section of the options. Choose the data you wish to save with the keygen. Click the Save button. Restart Autocad and choose the keygen you saved earlier. Q: How do I use jq to get values from multiple elements? I'm trying to use jq to parse xml and output some values from multiple xml elements. I'm sure it must be simple, but my search fu is weak today, I am not sure what to search for and jq is not giving me any help. What I'm trying to do: First title First author 05/15/2014 10:00:00 Second title Second author 05/15/2014 10:10:00 Third title Third author 05/15/2014 10:15:00 What I've got so far (that doesn't work): jq '//article/title' article.xml jq '//article/pubDate' article.xml A: You probably want to use XPath (like I did above) to select the title and pubdate elements, but you can also use the jq -r function (short for "jq restructure") that allows you to write out the results as a shell script, so you can do \$ jq -r '//article/title' article.xml First title \$ jq -r '//article/pubDate' article.xml 05/15/2014 10:00:00 \$ jq -r '//article/title' article.xml First title Second title Third title Healthcare cost-containment: an Irish perspective. Cost-containment strategies have historically been poorly documented and the evidence base for their effectiveness is inconsistent and often contradictory. The true impact of such policies on the quality of health services delivered to Irish citizens is unknown. The purpose of this study was to investigate the

Draw clean, accurate vector graphics with accurate precision. Text will wrap automatically and automatically adjust to fit content. You can quickly create and style your typeface, including displaying strokes and kerning automatically. You can also "draw" your type directly in the drawing, based on your own vector character style. Tap or tap-and-drag to select free-form shapes and spline curves. Dynamic spline curve tools automatically follow the contour of the selected spline and snap to nearby edges. (video: 3:38 min.) Draw smoothly with pencil and ink pens. Pen pressure can be adjusted dynamically, and selected pens can be dynamically constrained to the selected layer. Use the Tab, Shift+Tab, and arrow keys to navigate linked views. The linked views are fully editable, and can be edited in a layout that is the same as the original. Simplify markup by adding properties to any symbol. Properties can be set for individual symbols or groups, with support for dynamic properties. (video: 2:27 min.) Understand and edit CAD geometry with a knowledge base. Use the new CAD Explorers to view and edit geometry properties and related markup, including text, annotations, and notes. (video: 1:38 min.) More powerful editing of linked view annotations. With "linked" annotations, you can edit the annotations in other linked views, and have the changes reflected in the current view. You can also set the "linked" annotations to represent different text styles. (video: 1:42 min.) Implement an entire office on your own desktop. Use the new Linked Services Architecture for all of the office features you need, including meetings and messaging. Save CAD files directly to the cloud. The AutoCAD Cloud enables users to store CAD files safely and securely on the cloud. Users can also share drawings over the Internet, or access drawings on any mobile device. Launch the Autodesk 360 suite for access to applications including Augmented Reality, robotics, and creative design tools. Improvements to the suite: The Autodesk 360 suite now supports Windows 10 devices and will be available in the next Windows Update. The product includes a new Autodesk Navigator for interacting with the products and creating great experiences across the Autodesk brand. Enhanced interoperability with third-party products and services such as CoreID
