Professional, Enterprise and Architectural Versions Autodesk also provides an academic version of AutoCAD (Pro/Enterprise/Architectural) for the design of buildings, campuses, bridges, water-jet tunnels and other engineering projects, as well as a version specifically for architectural design. AutoCAD contains several unique features, including animation, workflows, and modeling. Other unique features include a customizable interface, support for non-rectangular and non-orthogonal 3D objects, and orthographic views of drawings. The most distinguishing feature of AutoCAD Architectural is that it can be used to model three-dimensional designs in the Autodesk Architectural design suite, and can be integrated with other Autodesk products. History Beginning with the release of AutoCAD 1993, Autodesk's primary focus was on computer-aided drafting, a subfield of engineering design. The first version was based on DGN, a language created by Autodesk to define a format for the interchange of all engineering drawing files. In 1998, Autodesk released its first version based on the EDLIN.NET-based DGN, code-named Redwater. This version was quite similar to the one that is used in AutoCAD today. The Redwater product line was sold to Corel in early 2001, and then to Google in April 2007, who re-branded it as Google Earth Platform in 2010. With the release of AutoCAD 2015, Autodesk released their first release of the product based on AutoLISP, which af5dca3d97

Edit: I want the two objects to collide and remove the position/velocity after. I've tried looking at this and this, but I think they're specific to bullets, which I don't have. I want this to be for a player that simply walks around and when it collides with something, it is removed. I don't know how to word this so I could find a similar question to this, but my code so far is var elmt1 = {x: pos, y: pos, z: pos}; var elmt2 = {x: vel, y: vel, z: vel}; function collision(elmt1, elmt2){ if(elmt1.x > elmt2.x || elmt1.x + elmt1.deltaX elmt2.y ||
