Preface The original version of AutoCAD in 1982 came with a preloaded sample drawing. In the preface section of the manual, the following statement was provided: "AutoCAD is the fastest and easiest way to create 3-D models and drawings of any complexity. Whether you're a designer, draftsman, or engineer, you'll find it easy to design, document, and share complex models. These drawings will be accurate, using full 3-D capability." IBM ObjectARX is the core of many products by IBM, including DraftSight. InDesign InDesign can be extended using Dynamic Tags and Dynamic Crop. A variety of plugins are available for InDesign on the InDesign Exchange website. Maya Maya integrates with a variety of third-party applications, including 3D Studio MAX, Alias|Wavefront, and Rhinoceros. Building information modelling Building information modelling (BIM) is an interactive building information modeling method that allows design and construction professionals to work together to generate, access, analyze and use information within buildings. Workflows Interactive workflows are based on industry-accepted standard

programming languages. With Python, you can use the Autodesk Python API to access BIM data via Python to do things such as read and write BIM data, generate and render 3D visualisations, create information, and more. With JavaScript, you can use the Autodesk JavaScript API to access BIM data via JavaScript. To access BIM data you may use the Autodesk.bim.Document.get() method to access the full BIM model in a Document, or the Autodesk.bim.Document.getHistory() method to access the history and information about the current selection. Alternatively, you may use the Autodesk.bim.Document.getLinked() method to access BIM data as it is referenced in another model. To use JavaScript, it is often better to look into BIM Layers and the Autodesk.bim.SceneViewer.Views.SceneViewerSelection.getSelected() method. Geomatics engineering AutoCAD is primarily used for the design, drafting, and visualization of civil and architectural engineering projects. A related, but more specialized, CAD tool is MicroStation. Civil 3D is a commonly used product for 3D design of civil and architectural projects. Architecture and construction Computer-aided design Architecture and Construction (ACAD) is a program that offers a number of tools for the design of building projects. It has an integrated BIM module for visualization of design data. Architectural design Architectural Designer offers tools for the design of buildings and structures. Real-time rendering Virtual Building Construction (VBC) is a proprietary product of Dassault Systè a1d647c40b
