Obtain your 3D-Part from the website of 3D-Part, or generate one with the 3D-Part keygen tool. Enter the dimensions of your part (make sure to select the part with the correct size/dimension/type, as there is no autocad keygen tool). You can also change the project scale to make the part smaller or bigger. You can then adjust the colour of the part and change its appearance (collision, deform, texture,...). Other features: There is a maximum of 7 materials in the part, they can be combined and changed. One material can be the ground color or a solid color, in the latter case the ground color has no influence on the appearance. All materials can be individually modified. The part can be displayed as normal lines, no curves. There is an option to apply the material to the whole model. References Category:Autodesk Category:AutoCADQ: A local Baire set is in the closure of its restriction Let  $(X,d)$  be a metric space,  $A \subset X$  a dense locally Baire set and  $f: A \rightarrow X$  a continuous function. Assume that  $A$  has the property that every neighbourhood of a point  $x$  in  $X$  contains a point in  $A$ . Now let  $\bar{A}$  be the closure of  $A$  for  $D$  some open neighbourhood of  $f(x)$  in  $X$ . Then  $\bar{A}$  is a closed subset of  $X$  that contains  $f(A \cap U)$  for any neighbourhood  $U$  of  $f(x)$ . Hence it follows that  $\bar{A}$  is dense in  $X$ . But this is a contradiction since  $A$  is dense and locally Baire. So, where did I go wrong? A: For each  $x \in A$  let  $V_x$  be the set of all  $V \subset X$  such that  $V \cap A = \{x\}$ . For each  $x \in A$  choose  $V_x \in \mathcal{V}_x$  with  $f(V_x) = D$ . Then  $B = \bigcup_{x \in A} V_x$
