The alpha2A adrenoceptor subtype mediates the anti-inflammatory action of the imidazoline derivative, clonidine. Clonidine and several other sigma receptor ligands bind to the alpha2A and/or alpha2C adrenoceptor subtypes. To define the affinity of the alpha2A adrenoceptor subtype for these compounds, we performed radioligand binding assays and adenylate cyclase assays in membranes from CHO cells expressing either the alpha2A or the alpha2C adrenoceptor subtypes. Unlike the affinity of the alpha2C
