

From the Editors and 'In Collaboration with Capstone Press' the authors bring to fruition the vision of a printed version of the Gospel with the clear intention of sharing the Gospel in new and exciting ways. Part of the Brand New Testament series, this work encapsulates the message of the Gospel in a form that can be read and shared with the younger generation. A valuable tool for any Christian ministry, this book helps to connect the personal, to the global and to the eternal. Evaluation of nitrile-functionalized graphene nanocomposite as a novel material for amperometric detection of hydrogen peroxide. A novel material, nitrile-functionalized graphene (GFN) nanocomposite is evaluated as a novel material for the electrochemical determination of hydrogen peroxide (H₂O₂). The material contains graphene quantum dots (GQDs), which are shown to provide the desirable catalytic behavior for the electrochemical detection of H₂O₂. GQDs are functionalized with functional moieties (e.g., cyano groups) that are responsible for the efficient electron transfer and high catalytic activity of H₂O₂ detection. Such a material has been prepared using a simple approach by the reaction between GQDs and 4-cyanophenyl isocyanate. Electrochemical properties of this material are investigated using cyclic voltammetry, differential pulse voltammetry and electrochemical impedance spectroscopy. The material is characterized by transmission electron microscopy (TEM), Raman spectroscopy, atomic force microscopy (AFM) and the surface area is measured using B.E.T. Nitric oxide (NO) has been oxidized to NO₂(⁻), NO₃(⁻), and NO₂(⁺), the measurement of such reactions is carried out. The novelty of the proposed material lies in its electrochemical catalytic oxidation of NO, which is carried out by a cathodic pathway, on the modified surface, the subsequent reduction of NO₂(⁻) to NO. The catalytic effect for the oxidation of NO is enhanced and a considerable oxidation current is observed, due to the presence of GQDs in the material. The electrochemical behavior of nitrile-functionalized graphene quantum dots (GFN) as a novel material for the electrochemical determination of hydrogen peroxide (H₂O₂) is reported in this work. The material contains graphene
