DriveCleanup Short Description: Cleanly remove all trace of your orphaned USB devices, CD-ROMS, floppies and external hard drives from your system. Each type of device has its own properties that must be given consideration during the cleanup process. DriveCleanup is designed to remove traces of all of

these devices from your system, which can be fixed by performing a complete disk cleanup. It also scans and processes the registry keys of all these devices for any additional entries. DriveCleanup How To Install: DriveCleanup comes as an executable of the application package. Unzip the file to any

directory of your choice and double-click on the executable. On the next screen, select "Complete disk cleanup", if you wish to do so. This will launch a complete removal operation of all orphaned devices from your computer. This will take a few minutes to complete, as it will take care of both scanning and removal of

all orphaned drives. Note that some devices may not be removed by the program. If you are unable to remove some of the device from this cleanup procedure, simply perform a disk cleanup afterwards. Why You Need DriveCleanup? It is usual for a user to have a laptop or some other type of portable PC, which is used

for a wide variety of purposes throughout the day. The drive is quite a common carrier of the information, and it is the need to keep it clean that forces the user to perform regular disk cleanups. In the case of portable PCs, the drive can be removed and inserted in the machine several times in a day. This means that if

the user is not careful, the PC will start storing copies of documents in the drive, sometimes even both on the same media. In some cases, the user may also have a USB drive, which will store important documents. Laptops can be easily connected to the Internet as well, so if such a case, documents, pictures or any other

information will be able to be transmitted over the internet
