What do you think? Leave your comments and share your thoughts. Thanks.. A: The reason it is happening is because the view contains more than 1 row (which will do that). It is not throwing an error, it is just not printing the information in the view. You need to change your concat to a join, or use group by to get the information you want. Try this:

```
select S.student_id
, count(distinct S.student_role_name) as
student_role_count , S.student_first_name +' ' +
S.student_last_name as student_name ,
tran.transaction_name from Student S inner join
StudentTransaction tran on S.student_id =
tran.student_id inner join ( select distinct
transaction_id, row_number() over (order by
transaction_id) as rownum from Transaction ) tranid on
tran.transaction_id = tranid.transaction_id inner join
TransactionRole trr on tran.transaction_id =
trr.transaction_id group by S.student_id,
S.student_first_name +' ' + S.student_last_name,
tran.transaction_name order by student_first_name +' '
+ student_last_name, transaction_name
```

For example, a VoD based architecture may enable a viewer to watch a movie while downloading more information about the movie. Although VoD based architecture delivers improved content viewing experiences, the infrastructure currently exists to deliver the content with a static experience (e.g., one viewing experience for all

viewers). That is, viewers typically receive the same content with the same media and delivery formats regardless of personal preferences or environmental conditions.

Panasonic & Microsoft Part Ways over Patent Tussle

MS had discovered a technology patented by Panasonic which Microsoft intends to use in improving its broadband technology, Reuters reports. The US tech giant has decided that it no longer wishes to use Panasonic's patent and has filed a request to the US Patent and Trademark Office (USPTO) to challenge the patent. What has happened is that Panasonic applied for a patent on 16th November, 2006, which is a developmental stage design. The tech giant received a denial for said patent on 12th December, 2006. Its subsequent request to the USPTO has been accepted and based on a review of the record the patent was denied and hence why Panasonic is suing MS. "This is a silly patent," said an executive at a major US tech firm, who was not permitted to speak on the record. "This is an arrogant and stupid guy (at Panasonic)." Here are some of the more telling provisions of the patent:

- Mobile nodes in a wireless communications network communicate with a location server. Each location server contains information about the geographic location of mobile nodes in the wireless communications network. Location servers also contain information regarding parameters of transmission power of a mobile node. The wireless communications network also includes a number of

Embedded Real Time Systems (DreamTech Press, 2005, ISBN 0-13-634773-X, 1st Edition) and safety of levetiracetam as an add-on therapy to sodium valproate and lamotrigine in generalized epilepsy. Objective: With the long-term use of drugs for epilepsy, about one-fifth of patients are refractory. The add-on of levetiracetam as a third drug is an alternative. Aims: To evaluate the efficacy and safety of levetiracetam as an add-on therapy in patients with refractory epilepsy. Methods: Prospective open-label study in patients with refractory epilepsy. Patients received levetiracetam as an add-on therapy to sodium valproate and/or lamotrigine. Efficacy was assessed with the Pediatric Evaluation of Disability Inventory (PEDI), the Seizure Severity Scale (SSS) and a seizure frequency diary
