Cracked Excel Password Recovery Lastic. Contrasting patterns of wing and wing vesicle development in two model insect species, *Locusta migratoria* and *Periplaneta americana*. In *Locusta migratoria*, posterior abdominal segment 6 (PS6) forms the wing vesicles, but in *Periplaneta americana* PS6 also forms the proximal portion of the wing filaments, the proximal wing membrane, and the distal wing membrane. This study examines the growth of the wing, wing vesicles, and proximal wing membranes during wing development using the light- and electron-microscope techniques. The findings show that in both species, the wing vesicles of PS6 grow first and have a microfibrillar attachment to the distal wing membrane of PS6. A perforated cuticular plate attached to PS6 later serves to fuse the membrane of the wing filaments and proximal wing membrane to the wing vesicles during pupal development. The ultrastructural observations suggest that the distinct morphological features of the wing in each species are due to an alternative developmental pattern in PS6. During a one-on-one interview with Yahoo! News, Pope Francis offered his thoughts on the Crusades and the Middle Ages: "The Middle Ages are particularly difficult," he told the Rev. Guy Finley, who hosts the "Theology in the News" radio program on Catholic Radio Network, in a talk aired yesterday. "The Holy See is deeply interested in this period of history," he continued, "because the history of the Christian faith is the history of persecution." He spoke of the two periods of persecution of Christians — the first after the death of Christ, and the second after the Edict of Milan, which ended the persecutions of the Roman Empire. "There are obvious examples," said Francis, "but the essential thing is this: the persecution is conducted by Christians, and Christians are harmed." Persecution can take many forms, including beatings, arrest, forced labor, persecution of the family, mutilation of body or souls, and even the death penalty.
