1.0.3.1 CrackedQ: Why

does this recursion

generate a stack overflow

in C? Given an array of

characters, reverse the

array. You should use

functions, not the built-in

reverse functions. Note: 1.

A recursive function is

defined as a function that

calls itself, passing a

modified parameter, e.g.

`print_function(func(array,i))`

where array is the original array and i is the current position. 2. A function with side-effects is defined as one that modifies its argument, e.g. `print_func(array,i)` where array is the original array and i is the current position. Input 1: Enter the size of the array: 3 Enter the original characters in the array: abc Output 1: reverse the array abc Here is my program. I am able to get the expected output for the input but am confused about why it generates a Stack Overflow Error. I have spent hours trying to solve this and I am now posting this question. I will be thankful if any one can

```
help me with this. #include
#include void reverse(char
arr[],int l,int r,int size) { if
(l==r) { printf("reversing...
"); printf("original array:");
for (int i=0;i c6a93da74d
