# File Lockit Full Version Free [Mac/Win]

File Lockit is a powerful security application that can password protect and lock any file or folder on your computer within seconds even if they are gigabytes or terabytes with options to make them totally inaccessible, hidden or read only. File Lockit provides security in all kinds of situations for broadband, dialup, wired and wireless intranet and internet including blogging, email, file sharing, instant messaging, music, newsgroup, office, p2p, pictures, videos, web browsing or just other regular everyday usage. File Lockit can help secure your computer including servers, desktops and laptops in an instant from malware including dialers, keyloggers, rootkits, spyware, trojans, viruses and worms all with just a simple click. File Lockit can stop hackers from installing malicious programs, secure your websites from being hacked and defaced and prevent people from snooping and prying on your secret files and folders. File Lockit is an excellent compliment to many of the already trusted anti-virus, anti-spyware and firewall programs that may be running on your computer. File Lockit is a must have program for everyone that provides bullet proof security at the kernel level. File Lockit Features: One Click Easy to Use, File Lockit is really easy to use and all you need to do is install the program and drag and drop folders to it to password protect them and to make them read only. Keeps You In Control, File Lockit provides complete and total control over any file or folder including making it totally inaccessible, encrypted, invisible, locked and you can even password protect a folder/drive if you have several drives like C D E F G H and want them to be password protected. Versatile, File Lockit not only allows you to password protect a single folder, it can also do the following; - Password Protect Folders - Password Protect Folders (and subfolders) - Password Protect Any Folder - Password Protect All Folders On Server - Password Protect Folders On Server - Password Protect Folders (and subfolders) On Server - Password Protect

### File Lockit Free

File Lockit Cracked Version Version 1.0.0 File Lockit Copyright (C) 2007 Ron Klein File Lockit provides security for all kinds of situations including broadband, dialup, wired and wireless intranet and internet including blogging, email, file sharing, instant messaging, newsgroup, office, p2p, pictures, videos, web browsing or just other regular everyday usage. File Lockit can help secure your computer including servers, desktops and laptops in an instant from malware including dialers, keyloggers, rootkits, spyware, trojans, viruses and worms all with just a simple click. File Lockit can stop hackers from installing malicious programs, secure your websites from being hacked and defaced and prevent people from snooping and prying on your secret files and folders. File Lockit is an excellent compliment to many of the already trusted anti-virus, anti-spyware and firewall programs that may be running on your computer. File Lockit is a must have program for everyone that provides bullet proof security at the kernel level. With file Lockit you can password protect your files and folders, allow only you or a single user (or group) to edit them, and lock them so that no one else can modify them. Also, by using a "Global Lock" feature, you can set a password for all your files and folders! File Lockit provides all the following features: \* Password protect any file or folder on your computer within seconds even if they are gigabytes or terabytes with options to make them totally inaccessible, hidden or read only. \* Lock files or folders to specific users or to everyone \* Lock files or folders to specific days or weeks \* Lock files or folders to specific times of day or night or time of year \* Lock all your files to a specific password or to a password combination \* Access your locked files/folders via Web (HTTP), FTP, Email, SMTP, MSN, IM, or any other protocol \* Select if locked files/folders should be emailed, copy, sent to a file share, print them, save them to a VCD/DVD, use them for the next level of encoding \* Choose the type of password (uppercase only, lowercase only, number only, or a combination of any of the above) \* Choose the number of attempts to enter correct password in order to unlock a file/folder \* Choose if files/folders 09e8f5149f

# File Lockit Crack+ Free License Key PC/Windows (Updated 2022)

File Lockit can provide protection against malicious hacks, viruses, worms, trojans, rootkits, spyware and other malicious software. File Lockit can detect all types of infections including spyware, viruses, trojans and worms, and can then terminate or remove them before they have a chance to do any damage. File Lockit can detect and remove viruses, worms, spyware and trojans in just seconds. File Lockit will protect your computer files, folders, data, data base and configurations from most forms of hacking attacks including key loggers, spyware, trojans, viruses, dialers, worms and malicious hacks. File Lockit can detect malicious hacks that could have been installed without your knowledge, then can immediately terminate or remove them. The ability to detect and terminate viruses, worms, trojans, spyware, dialers, and trojan traps in just seconds is what File Lockit can provide. With File Lockit you can: • Lock a file or a folder to prevent unauthorized users from opening, copying, moving, reading, writing, etc. Even if the file or folder is already on the desktop, File Lockit can create and password protect a hidden folder where you can save sensitive information that should not be disclosed or intercepted. • Password protect a file or a folder to prevent your family and friends from opening, copying, moving, reading, writing, etc. • Password protect a file or a folder to prevent snooper and hacker attacks. • Use File Lockit on a server and protect it against worm attacks, trojan attacks, spyware, viruses and spyware. • Create secure passwords that are impossible to guess by means of brute force and dictionary attacks. • Password protect your website against hacking attempts and viruses. • Password protect your web servers, file servers, intranet servers and webservers. • Password protect your media content to prevent you from accidentally sharing your personal information with unauthorized persons. • Create hidden folders and/or folders on your desktop that are protected by a password to prevent unauthorized users from viewing files that you deem safe to share with others. • Password protect your important computer files including; your business files, your personal and private files, your music and your pictures to prevent them from being viewed or altered by unauthorized persons. • Password protect computer configurations, registry information, personal information and computer passwords. • Protection against the spread of malicious software including dialers
