Top free PC games. This is our collection of games that require no. Graphics: Intel Core i3, ATI Radeon (X1300) 2GB RAMA . Position holders at the Boston Marathon will be outfitted with GPS-based wearable devices that monitor their health throughout the race, and the data will be shared with health experts. The technology may be the first of its kind at any race, according to the race organizers. GPS devices are becoming more widespread, and these tech fixes may be here sooner than we think. Here's some of what you need to know about them. What Are GPS Devices? GPS devices are small computerized gadgets that allow people to track their location by tying into their cellular networks. Because the user's location is monitored and stored online, people can also see where they have been. Examples of apps that monitor location are Foursquare and Strava. For runners, a GPS device may track workout sessions and other health factors, including heart rate. The MIT Media Lab created the first GPS device in 1974. The system, developed by Theodore Pedroncelli, was originally used to track shipments of goods across the country by military trucks. Since then, GPS devices have grown in popularity. In 2009, the Federal Communications Commission estimated that approximately 90 percent of the U.S. population owns at least one mobile phone. Of these, nearly half own a GPS-enabled device, and nearly 75 percent of these consumers use GPS for navigation purposes, according to Pew Research Center. The Boston Marathon sent an open letter to sponsors asking them to donate
