April 1, 2015 Flawed and incomplete at best but the details are there and it's a neat game if you're a fan of The Idolm@ster games. Overall Unjustly poor. The game can take as long as 5 or 10 minutes to load, and will stall sometimes and crash altogether. This is just silly. It's almost a laughingstock. Perfectly valid, as the game is borderline impossible to get through, probably because of its lack of consistency in its randomizing of items. I'm thinking of just giving up on it altogether, but I'm so very close to the ending. Story: *** By now, you've figured out that there isn't much of a story, but you'll get introduced to the characters nonetheless. There's a side quest for each chapter, but there's no progression for those. The characters get introduced and that's it. Graphics and Audio: * Think of this as the 7D's, but with about half as many items per stage. Gameplay: * I tried to play through as much as I could. During each chapter, your goal is to collect all of the items within the allotted time. Most of the items can be found almost immediately; the only items that require searching to find are the Lamp Pieces. Which, of course, I can't find. Items: There's not much of an assortment of items (actually, there are only five types of items) and most of them are impossible to acquire, even if you complete a stage. Some items are extremely hard to find, like the Stone Pendants, the Elloygoskia, and the Bene Libris. Controls: It's very easy to get tripped over and it's very easy

What's new:

Wars 2 A gameplay video showing a preview of the Boss Monster Wars 2 game which is currently being developed by Die Garten Bruder.The game features 9 different boss monsters, each with their own attacks, specials and a story and each one with its own resemblance towards Area 52. The game is also fully equipped with a ragdoll physics model, damage, collision and depth sensing of the camera. There were many games in the past that featured different fantasy worlds but they also were a little bit boring and not really exciting. When I was planning to make a more 2d browser-game, I wanted to find some cool fantasy worlds to explore and to understand how everyone can create their own fantasy worlds with the use of the Torque2D API. After many trial and error, going to the Outer Limits website (and playing around with the provided data file, I could finally create my own fantasy world. Then I started developing a 2D browser-game. I wanted the game to be as simple as possible since I felt that not so many people play browser-games like this. There are various types of fantasy worlds that you can really explore. When starting out, my main goal was to build a world that feels alive and exciting. After playing around with the Torque 2D API, I then came up with the idea to create a game where you basically control a hero in a 3d world. There are different types of gameplay that can be implemented but I quickly noticed that most of them were either too complicated or a lot of work. Since I wanted a simple title, I changed my design and now a hero is trying to survive in a fantasy world that feels alive and exciting. During the building phase, I created many different original buildings and enemies. After building and testing the first platform version of the game for a while, I went back to the original idea and I decided to come up with a role playing genre. So the first version of the game got a story line, quests and a bit of skill progression (according to the player's actions in the story). One of the game's first goals was to not have unnecessary features or a lot of things that you don't really need. The game started getting a lot bigger in terms of game code. The gameplay was pretty solid but the background needed more work. Also the enemies didn't feel as human as they should. The background

and NPC artwork was good
