PhishBlock Keygen For (LifeTime)

- Block (same as close) dangerous domains/sites that are known to infect your computer. - You can add domains/sites to the list of known dangerous domains/sites using an easy to use wizard. - You can also add IP addresses/DNS hosts to the database for future protection. - Block known infected sites by preventing access to them. - Block single websites from dangerous domains/sites by preventing your computer from accessing them. - PhishBlock is a network filter driver which prevents you from accessing dangerous websites. - It monitors the site to make sure it is safe. - PhishBlock keeps a history of sites it has blocked. You can view history by clicking the button 'Add Sites to the History'. - You can add notes for sites to keep track of them. - You can add the date and time to your site list to make it easier to find them later. - PhishBlock uses a system icon to notify you when a site you have blocked is accessed. - PhishBlock comes with a help file. - You can prevent phishing by sending an infected link to your antivirus. - PhishBlock saves the entries it has made so you can restore them later. - You can set a minimum timeout, so you don't have to wait forever before the site blocks. - PhishBlock has a simple user interface and is easy to use. - PhishBlock creates a restore file, to restore all blocked sites from the list. - PhishBlock supports Windows 2000/XP/2003/Vista/7/8/8.1/10. - PhishBlock is bundled with the newest version of Windows, Windows 10. - PhishBlock is not bundled with any antivirus software. - PhishBlock is a small application. - PhishBlock is light on RAM (Memory). - PhishBlock requires .NET Framework 2.0 to run. - PhishBlock is written in Visual C#. Phishblock is a Network Filter that functions as a hybrid web browser manager, web filter and control panel for your web browsing experience, Phishblock will automatically detect dangerous domains or websites, which are based in known virus and phishing websites, to better protect your personal information from such threats, Once Phishblock has determined a website is malicious it automatically stops you from access to the website and optionally alerts your Antivirus to take action

What's New In?

PhishBlock is an intuitive software solution aimed at protecting you and your personal information from cyber attacks, by preventing access to websites with a known reputation for infecting computers. Approachable and accessible UI The program is quite simple to handle, its usage requiring little to no prior experience with such tools, particularly since all you need to do is run it and allow it to do its job. The main window of PhishBlock will display a history of blocked websites, while also enabling you to manually add URLs, Name Hosts or IP Addresses to the default database. Effortlessly block access to dangerous websites The web is a notoriously unsafe place, as it can infect your computer with all sorts of malware, some of which not even your antivirus will be able to see, until it is too late and your personal information is in the hands of ill-intended individuals. PhishBlock aims to prevent that from happening altogether, by detecting and disallowing access to webpages, IP addresses or DNS hostnames that are signaled as infected. It does this by means of a network filter driver, in order to stop the problem before it even becomes one for you. As such, every time you unknowingly try to browse a perilous web page, the application automatically closes it and informs you that it has been blocked. This way, PhishBlock reduces the likelihood that your data may be stolen and used for illicit purposes. Moreover, you can add yourself websites to the database, that you know are infected, this information being shared with other users of the utility. However, it also draws its data from online sources. A handy means of preventing malware from affecting you To conclude, PhishBlock is a practical and user-friendly tool that can help you further protect your system from intrusions, enabling you to keep your data safe by preventing your PC from getting infected, rather than deal with the consequences later. PhishBlock Review Is the program safe? Yes, the product comes with a 30-days trial, so you have time to test it out for yourself, to make sure that you do not run into any conflicts with your antivirus. Once you've decided that it will work for you, you can buy the software for \$39.95, which represents a pretty fair price for the product and the quality that it provides. Besides, the easy-to-use interface and functionality of the software are more than enough to make it a worthy

System Requirements For PhishBlock:

OS: Windows: 7, 8, 8.1, 10 Processor: 2.2 GHz Dual-Core Processor or faster Memory: 1 GB RAM Graphics: 1 GB of VRAM or higher DirectX: Version 11 (Version 12 Recommended) Hard Drive: 20 GB available space How to Install: Download the game from the official website. Run the setup program and install the game. Once the installation is completed, launch the
