I need to update the username and password which are in textbox to web services. The web service has login method. Below is the Json request for login method { "username": "komide", "password": "12345" } If the username and password are valid then it will return username and password and I will update the text field. But I cannot get how to update the username and password from the text field which I get from response, Can anyone please help me? A: When you receive the response, do this: NSDictionary *responseDict = [response objectForKey:@"response"]; NSString *username = [responseDict objectForKey:@"username"]; NSString *password = [responseDict objectForKey:@"password"]; You can then set your username and password in your text fields. The church has been one of the leading voices for marriage equality – but in Australia many face a looming threat to their livelihoods if the law changes. The Australian Commission for Law Reform report yesterday laid bare the impact of the legalisation of same-sex marriage on religious ministers and their congregations. Across the country over a million of ministers are facing an uncertain future, with their livelihoods threatened in a number of states. In Victoria, for example, half of the state's Christian ministers are married to members of another gender, and more than half of them are gay. "It's really a question of, should I get married?" says
