6 .Q: Sorting columns in a multi-  
column index in Pandas I'm using  
pandas for data analysis. One of the  
columns I'm using is a multi-column  
index. My index is sorted based on  
this column. How can I use df.sort()  
to sort this index? For example, if I  
have the following: stations=pd.Mult  
iIndex.from\_product(['ABC',  
'DEF','GHI'], ['Last Name', 'First  
Name']) Then  
df.set\_index(stations).sort('Last  
Name') is not sorting this index. A:  
You can groupby on the last column,  
then sort the resulting list of lists,  
then rejoin to the dataframe using  
the idx which is created by sorting:

---

```
In [20]: df['Last Name'].sort_values(
ascending=False).groupby(level=0,
sort=False).apply(list).values.reinde
x(df.index, method='ffill').reset_inde
x(drop=True) Out[20]: In [21]: df
Out[21]: Last Name \ 0 ABC 1 DEF 2
```
