A conventional flatbed scanner can be integrated into AutoCAD and used to capture 3D models. AutoCAD is one of the oldest and most widely used programs for designing and drafting. The program is available in two versions, AutoCAD LT for students and amateurs and AutoCAD R2018 for designers. AutoCAD LT has limited functionality while AutoCAD R2018 is better suited for professionals. There is also AutoCAD LT for Students 2018, which is similar to AutoCAD LT 2017. Screenshots of AutoCAD: What is AutoCAD? AutoCAD is a type of CAD software used to create 2D and 3D drawings. It was first introduced in 1982 and is a commercially-licensed software that allows the creation of 3D models of physical assets. The program was originally designed for use on desktop computers and developed by Autodesk. However, the company now offers it as a mobile application, as well as desktop and cloud versions. AutoCAD is one of the most widely used computer programs for drafting. With AutoCAD, you can plan and create 3D models, as well as 2D design drawings. What to do with old pv-1 cases 06-01-2011, 05:32 PM Hi folks. After watching a few of the videos on youtube (about building a powder tank), I was wondering what some people's experience was with old pv-1 cases. I would love to convert a pv-1 to a tower box, but have not been able to find any information on the possibility of using such a thing. Do you have any suggestions for the best way to go about this, or have any great ideas on what to do with cases from the past? Re: What to do with old pv-1 cases The original PV-1 cases are easy to strip, but if you ever go through the trouble of removing the powder from them, I'd seriously consider tearing them up and recycling them into some kind of rust-resistant container. Re: What to do with old pv-1 cases They're an old school case with a lot of positives. I'd fill it with grains, put a couple of good swivels on top, and then seal it up. Just don't go overboard. The reason for the caution here is that the base plate size can be off a bit. The original PV-1's had no locating holes in the base, and they were frequently made and sold by several different manufacturers over the years. In that case the case would be a bit undersized, and using a larger base plate would make them more robust and durable, but make sure you get a base that'll fit the original PV-1's. If you're going to go through the trouble of removing the powder,
