Views The same base CAD data can be assembled in different views. View filters, templates and 3D objects can be created as well. For example, user can create a view for design purposes and another one for presentation purposes. For the purpose of quick and easy referencing, views are often simply named: "Design", "Print Layout", "Presentation" etc. Shadow AutoCAD 2010 provides a shadowing capability where the shadow of a view can be selected for use as a template for the rest of the drawing. This is also useful when making a template drawing, in that the shadow allows the user to preview the design before the template is made, thereby reducing the risk of cutting something the wrong way. Some types of views also have the ability to be shadowed. User-defined views are not included in this category. Shadowing of 3D views is not available in the current release. 3D Views AutoCAD 2010 added support for 3D views. The view can be changed to switch to different camera position. The view can also be displayed in landscape and portrait view. This view feature was based on the ideas behind the online 3D editors found on and AutoCAD 2011 introduced more user-defined view options including rotating the view. The rotating feature was added to simplify rotation of views and viewports, and its operation is independent of the object's in-plane rotation. User-defined views

can be set to be camera views (3D view), and workplanes (2D view). Allied3D Allied3D is a 3D modeling program developed by Delcam. The software is used to create 3D models for use in AutoCAD. The company also provides a number of professional AutoCAD plugins for use with the software. The software is proprietary but it is a good alternative to AutoCAD which is quite expensive. The software is compatible with older AutoCAD versions, and supports more recent releases as well. The current version of the software, AutoCAD 2015, supports AutoLISP scripting.
