AutoCAD and AutoCAD LT represent two different product lines. As shown in the following table, both products include similar features and tools. The differences are typically most apparent when working with legacy drawing files created with an older version of AutoCAD. AutoCAD and AutoCAD LT are used to produce professional-quality 2D and 3D drawings. AutoCAD LT does not include 2D plotting tools or a drafting program (i.e., it is strictly a 2D CAD program). The Summer Flood of 2009 killed about 20 million trees and millions of fish, and it didn't just flood them — it polluted them. In an historic study, scientists reveal that the flood not only affected the rivers but may have even disrupted the Great Lakes ecosystem in ways that are still unknown. “We were able to show that the flood not only did damage to fish populations, but that flood waters altered their behaviour and changed their physiology,” says Stephen Alexander, a fish biologist at the University of British Columbia. “That means they respond differently. That's more than just a structural damage.” The flood peaked over two weeks in early June 2009, pouring as much as 10 metres of water over the levees around the city of Detroit. It then breached the levees and proceeded to cover 2.4 million hectares of land. The federal government estimates that about 20 million trees were killed, some with their roots still attached to the ground. At the time, it seemed like a big deal. But today, we're left to wonder if the cost of fixing the damage might actually cost the entire Great Lakes ecosystem
