Unified Modelling Language (UML) Modeling was developed by ObjectARX as part of its development. ObjectARX supports two features (Add-on Application and Add-on): ObjectARX The ObjectARX ObjectARX is a cross-platform C++ class library that supports the creation of add-on applications for AutoCAD and AutoCAD LT. Open Architecture for Scientific Application Development (OpenASAD) is an open-source add-on which allows C++ classes to be used in AutoCAD. This was developed by the project cflow and is based on the existing ObjectARX library. OpenASAD is free software released

Q: Need one to one relationship, but user has many roles My entity has a many-to-many relationship with another table. I have a service to get all the roles that the user has, but I also need to check if the user has this role and if not add it to the user. I am using this service to get the roles: public function getUserRoles(){ \$query = \$this->em->createQuery('SELECT userRole FROM FaltaEntidadeBundle:UserRoleUser WHERE user = :user') ->setParameter('user', \$user); return \$query->getResult(); }

The result is what I need, which is a list of roles that the user has: { "userRoles": [{ "user": "user1", "userRole": "role1" }, { "user": "user2", "userRole": "role2" }, { "user": "user3", "userRole": "role3" }
