It's a pain to crop images using Photoshop, as it has an awkward feature where you have to drag an outline of your image around the image to crop it. Instead, you can use the **Pen tool**, which does the exact same thing without any tricky dithering and will cut an image for you in a pinch.

Nowadays, I'm using Photoshop, but I always save my files as PNG. By the way, most of the time I'm using the default settings on Photoshop (PSD files for textures and PNG for the other stuff). There are many presets in Photoshop (most of them are from 2014 and more...) but I always go with the default settings for quality and speed. 1. Photoshop Start by downloading the Photoshop CC When you install it, you get the full version. You can change the presets by accessing the presets that are predefined in the preferences. You can access presets by clicking on the CC logo in the top right corner. When you save a PSD file, you can save as any format you like. And, when you open a PSD file in another app (photoshop, or any other editor), if it's not a layered PSD file, Photoshop automatically groups the layers. You can select a layer to see the properties (change background color, duplicate it, lock it), or change position and size of each layer. For some reason, Photoshop had a lot of bugs when I installed it on Win 8.1 and now. I can work on my images, but sometimes it closes without warning and when I open the app again, it crashes. I have to reinstall Photoshop every time, then I wait to upgrade to the latest version of the app. So, I have a software named "Checkpoint". It's an Autoit application that allows you to check if you can exit Photoshop safely. It sends you a notification when an app is about to close. Save your file as PNG When you click on Save, the file will be saved directly as a PNG file. This option is great for: White balance Color balance Creative filter presets Black & White Monochrome Grayscale RGB HSL Luminosity Saturation Contrast Opacity Dodge and Burn (screenshot #1, screenshot #2) This version of Photoshop has the "Auto" filter in which you can crop an image, equalize brightness, contrast, and colors; add some effects, the "Crop" tool and much more. I prefer to use the "Free" filter, which is 388ed7b0c7

Photo: Courtesy of Google Not a day passes without some familiar gadget owner lamenting the death of the “good old days.” Who can forget the days of dial-up internet or even dial-up phone service? Imagine any phone or computer hardware you’ve ever owned, and it almost certainly predates today’s simpler, faster technology. But in the case of cellphones, the transition away from the small boxes we once lugged in purses and bags has been a long, painful, and ongoing process. The cellphone era began in 1979, when Bell Canada unveiled the Bellerophon, an original Motorola clunker, and the term “cell” was first used to describe it. But for much of the 20th century, cellphones were so small and often unusable, expensive, expensive, and utterly the domain of the premium class. Cell phones were the size of a cigarette pack and the kind of thing you would literally wear around your neck. Indeed, so tiny were they that old analog cellphones could only make or receive calls — and before the advent of cellphones, calls were often free. So the devices were essentially mobile phones, and their excessive size was likely the reason they were called that. But in the wake of deregulation in the 1980s, cellphones got much more capable — but never small enough for a pocket, nor smart enough to do many new things. Even when the word “cellphone” stuck, even when consumers began to embrace the devices as a new norm, there was no such thing as a “smartphone.” Smartphones today are not just phones, they are the basis for a significant portion of the internet itself. And smartphones today are no more powerful or useful than they were when the iPhone hit the market, back in the early days of the computer. But as a user base, we love them. We gush about them. And because they also help us live our lives more freely — as the Texas telephone commission says, that is the “road to citizenship,” in the EU — we take for granted that at least in the near future, every smartphone will be, in some ways, almost as powerful as a typical laptop computer. So what’s the problem? The issue for tech companies is they’re faced with two conflicting visions of the smartphone. The first, as Ars Technica puts it, is “smartphone as a

Algae-based biodiesel production: an emerging technology for renewable energy? The use of algal biomass to produce biofuels and other valuable organic compounds is an emerging technology. Biofuels such as biodiesel, canola oil, and microalgae oil have been produced, utilizing different processes and biochemical pathways. In this paper, we will review the scientific and technological challenges involved in producing algal biomass and algal oil for energy and its potential impact on the environment. We will also discuss the current state of research on this topic.

NEW DELHI: The Ministry of Home Affairs has instructed all central government offices to let out one ‘white van’ for taking immigrants to the red corridor each day to ease the immigration challenge. The ministry has also asked all states to take steps to maintain social harmony in the wake of the anti-CAA protest. Jammu and Kashmir, Maharashtra, Delhi, West Bengal and Karnataka have been given the responsibility to secure the border and prevent the illegal movement of citizens. Indian police have been directed to take necessary measures to control the situation. Senior MHA officials said, “Every day, immigration offices across the country give out one white van for taking the illegally passed ‘D’ category immigrants to the Red Corridor.” The red corridor is a route through which immigrants without valid documents can enter the country by paying an illegal fee. But there has been a spike in the number of such cases after the Citizenship Amendment Act (CAA) was passed in Parliament. The ministry has also asked all states to adopt special security measures at India-Pakistan border to prevent infiltration, organised by the Pakistan Rangers. Officials said, “We need to ensure that there is no infiltration as it hampers inter-state movement.” According to the MHA, there is a network of agents inside India who take illegal immigrants across the border. The ministry has also advised states to maintain law and order in their respective states, following protests against the CAA in Nagpur, Bengaluru, Hyderabad and Kolkata.
