I've done a git rm readme.txt in this branch and have updated the origin/master branch with the changes. I have tried deleting the readme.txt using an rm -f on the local file system and using a git rm readme.txt as per the git documentation. I've also tried git push --force-with-lease origin master after pulling from the remote to my local branch. Both methods push the changes to the remote branch. Any ideas? A: If you want to remove the readme.txt file from your local copy and make sure that it is removed from your remote branch, use git rm --cached. A: git rm readme.txt --cached git commit git checkout master git rebase --onto newhead new-branch # now test with git status Q: Multiple users with a single user ID How can I create multiple users with the same ID, but different user names? Here is what I've tried so far: username = 'auser' first name = 'fuser' last name ='suser' user = User.objects.create(username=username, first name=first name, last name=last name) And I get this error: Exception Type: IntegrityError Exception Value: UNIQUE constraint failed: users username id username key A: Firstly you should not use the User model for authentication. It's for making the User an Identity and not a role. You should have a separate authentication model, like Django's auth package. Secondly you need to use a USERNAME FIELD when creating the User object, username = 'auser'
