## 2011 TCNA Handbook Now Availablepdf

The 2011 TCNA Handbook now includes an installation guide for glass tile that will be included in . TCNA Installation Manual download file with the latest edition of the 2011 TCNA Handbook and 2011 TCNA Installaion Manual becomes available for purchase on the TCNA website for a limited time.. The 2011 edition has been revamped for ease-of-use and now includes methods for . Download as PDF. TCNA Handbooks Now Available for Download!. The 2011 edition has been revamped for ease-of-use and now includes methods for. Osteoarthritis (OA) is the most common form of arthritis and is a major cause of disability worldwide. The most salient pathological features of OA include progressive loss of articular cartilage and subchondral bone remodeling, which can lead to joint-space narrowing and chronic pain. Currently, only treatments that focus on suppressing symptoms are available. Therefore, there is an urgent need to develop therapeutic strategies that directly repair cartilage and bone. Over the past years, mesenchymal stem cells (MSCs) have been shown to be a promising cell source for cartilage regeneration and bone repair, and clinical trials based on MSC therapy have recently begun. Among the known MSC populations, Human umbilical cord-derived MSCs (hUC-MSCs) are an excellent cell source because of their abundance, easy accessibility, low immunogenicity, and ability to differentiate into both chondrocytes and osteocytes. Although a recent study reported that hUC-MSCs could restore articular cartilage and subchondral bone when transplanted into nude mice, the functional role of hUC-MSCs during OA remains unclear. In this study, we hypothesize that transplanting hUC-MSCs into the knee joints of the rat will ameliorate articular cartilage and subchondral bone damage caused by surgically-induced OA. To test this hypothesis, we will inject hUC-MSCs into the knee joints of a rat model with surgically-induced OA. The repair effects of the hUC-MSCs will be evaluated by histology, immunohistochemistry, cartilage degeneration indices, and biomechanical testing. Aim 1 will determine whether hUC-MSCs alone are capable of repairing cartilage and bone damage in OA. Aim 2 will determine whether hUC-MSC transplantation can rescue the mechanical properties of cartilage and bone in OA. Aim
