Almost all graphic designers use Photoshop. It is the market standard in the area of design and creation of images. Every now and then, the question of switching to a new program or closing the project by using Photoshop comes up. Sometimes designers or illustrators question the familiarity of working with Photoshop, but this doesn't have to be the case for any designer or artist. Of course,

Photoshop is extremely useful in many other ways, such as designing websites and games or creating emoji, but it is still the market standard for creating and editing images. In this tutorial, I'll show you how to edit a high-quality full-body photo of a model in Photoshop. Creating the Background First, we need to create the background. For that, you need the background texture that you can download from the Google Images website and import it into Photoshop. Simply go to Google Images, click the search bar, enter the text you want to

find, and then look for the image you want to download. The graphic designer Anne-Laure Dumas created this background. The designer used Vector PSD and Layer Factory. The background texture is available on the Google Images website. The first thing I do with my own photos is to add a background so I can see the lighting and composition of the photo. Open the image with Photoshop. Go to Filters ► Desaturate ► Curves. This will desaturate the colors. The default setting is probably all or nothing. Select the right half of

the picture and move it to the left.

The contrast has now changed.

Now you can see the lighting and other elements. Now you can crop the photo. Use **Select ► Edit ► Crop** and click on **Crop Image**.

Now I go to the **Window ► Selection ► Selection** and press **D** to highlight the pixels. Change the blending mode to **Overlay**. Also add the layer mask to the layer. The next step is to add a gradient background. Go to **Window ► Transparency ► Gradient**. Now you'll have to be precise. If you have a specific color, you can click on it to select. Then enter the

color and click OK. You can see that the light is now different. Photoshop Elements does a good job at giving you these gradients. If you don't see the gradient well, try using the colors on a

footballersQ: How to use

AppleScript with an

AppleScriptProcessor in Swift I'm
having issues with an

AppleScriptProcessor object

within my Swift application. Upon
running my application I get the

error: Can't create run loop for process: An operation that could not be completed... (13) The error occurs within an NSTimer (keep in mind I'm using a while-loop and other functions) and it seems to occur at random times even if the while-loop is commented out. I use the following method: `ApplescriptProcessor().processScript("set the application to sent mail")` let `answer = ApplescriptProcessor().runAndWaitForResult()` The application gets sent mail no problems but this error occurs. I'd like to avoid doing it with `NSResponder` events for now, but

if

Surgical repair of anterior urethral stricture with Cope's plasty for the treatment of urethral obstruction in male cats. The aim of this retrospective study was to evaluate surgical treatment of male feline anterior urethral strictures.

Surgical techniques for the repair of anterior urethral strictures included cystourethroscopy, the Bassini technique, incision urethroplasty and the Cope's plasty. A total of 32 cats (20 were

surgical candidates and 12 were surgical failures) with urethral strictures underwent urethral repair surgery and were reviewed retrospectively. No patient had clinical signs of persistent urinary tract infection, urethral trauma, double strictures or urethral tumors. The mean age of the surgical candidates was 8.6 years (range: 1-15) and the mean follow-up was 2 years (range: 0.5-6). The Cope's plasty was used in 17 cats, the incision urethroplasty in eight cats and the Bassini technique in seven cats. Of the 17 cats that had the Cope's plasty, 11 had stable

outcomes, 2 had strictures that recurred after treatment and four had long-term micturition dysfunction after the surgery. Of the eight cats that had incision urethroplasty, three had mild urinary tract infection and five had normal micturition after surgery. Of the seven cats that had the Bassini technique, six had stable outcomes and one had strictures that recurred after surgery. Urethral repair using the Cope's plasty was a useful technique for the treatment of feline urethral strictures, although long-term follow-up is needed to

determine the outcome of this technique. On a personal level, I love it when I see people at their best, doing their best both at work and in life. I love it when a confident developer can look people in the eye, solve their problems and make them feel like they're the real customer. I love it when the person standing next to me in line is just as invested in the process as I am. I love it when we take risks, get up from our chairs, put our fingers down on the keyboard and build something. It's my favorite time to code. -----
