of coronavirus is responsible for three fatalities and 24 new cases of the infection in Singapore, local health officials said today (March 6). The first fatal case was a 70-year-old Singaporean man who died at Sentul Hospital on Feb 24 and the latest was a 61-year-old Singaporean woman who died at the National Centre for Infectious Diseases on Saturday, said the Ministry of Health (MOH). Most of the new cases are linked to a cluster of infections in dormitory block 9, Block 551 and adjacent blocks of Permaisuri Specialist Hospital, where a Singaporean man, a Singaporean woman, four Malaysians and four Indonesians were confirmed to have the virus. But MOH said the three latest fatalities were not linked to the cluster. It added that another

eight confirmed cases are linked to the cluster, and another six are under investigation. More than 300 people are being isolated at various quarantine facilities, while flight bookings to Singapore are being paused. The measures are aimed at managing the potential spread of the virus, which has also been identified in Iran, the UK, France and Germany, among others. MOH said Singapore's outbreak response system is in place to deal with infectious diseases, including the new coronavirus. It added that the risk of outbreaks in Singapore is low. But travellers from the affected areas and anyone who has close contact with the infected persons should continue to take all necessary precautionary measures. These include: Caring for symptoms of

infection Treating suspected cases immediately Practising good personal hygiene Washing hands frequently with soap and water Avoiding contact with live animals, poultry, laboratory specimens and anyone showing symptoms of illness Anyone with a fever or flu-like symptoms should seek medical attention immediately

Quantifying the Impact of the Transmission of Anticoagulants on Reductions in Transfusion Requirements. The 2012 guidelines for prevention of acute blood transfusion are stringent, requiring transf
