Generic customization provides a way of making changes in a generic manner, such as when it is difficult to customize code for every scenario (for example, due to the lack of development time). The ObjectARX core is a generic object class library. Graphical programming is used for creating custom tools and dialogs. AutoLISP was the most popular since it was developed by Autodesk (with support from others) until AutoCAD 2008.

Fibaro is a graphical programming tool, designed for

writing and executing AutoCAD extensions. Extensions can be composed of macros and ribbon buttons and/or dialogs. macros  
Macros are AutoLISP functions, which allow AutoCAD to be customized in a similar way to what would happen if a programmer custom coded a part of the program. Ribbon and toolbars Tools may be added to the ribbon toolbar or to a tool palette that appears on the ribbon toolbar, which is visible by default when the drawing view is "Design" or "Edit" view. The ribbon has a tab named "Properties". In the "Properties" tab, all ribbon toolbars and tabs are visible, and there are sub tabs for each ribbon toolbar. In order to create a new toolbar, open the ribbon and click on the

"Create ribbon tool" icon or use "Insert" command from ribbon toolbar. Each ribbon tab has a group of buttons, which can be toggled on and off when we click on the tab. The ribbon controls show controls, which are user-defined or show standard controls. Tool palettes

In AutoCAD there are many default tool palettes that are available from the ribbon toolbar as well as from the toolbar of other windows. There is a default tool palette and a user-defined palette which can be activated by clicking on the icon of the tool palettes. The ribbon toolbar offers a large number of the tool palettes available in AutoCAD. A user-defined palette can be added by clicking on the "Create user-

defined palette" icon on the ribbon toolbar. The user-defined tool palette provides a significant number of the currently existing tool palettes, and can be created by clicking on the "Create custom palette" icon. Custom controls A custom control is a control or menu option that is not included in the standard palette. The user can create a custom control by double-clicking on the ribbon control button and then using the Class Format dialog
