screen and then click»»«« on Program/.Use of the coracoid process for arthroscopic rotator cuff repair: a comparative
study between the use of an outside-in and inside-out technique. Arthroscopic rotator cuff repairs are performed widely in
recent years. This study was undertaken to compare the clinical results of the arthroscopic rotator cuff repairs performed
using outside-in and inside-out suture techniques. A retrospective comparative study was performed on 28 patients who
underwent arthroscopic rotator cuff repair using the inside-out suture technique with a coracoid process anchor and 28
patients who underwent arthroscopic rotator cuff repair using the outside-in suture technique with a single-row suture
anchor. The operation time, visual analog scale (VAS) pain score, the range of motion of the shoulder at the time of follow-
up, the modified University of California Los Angeles (UCLA) score, and the Constant scores were significantly better in the
outside-in suture repair than in the inside-out suture repair (p #include "build.h" #include "Paint.h" extern int
